4 LED Status Indicator

The lights of the headsets are red when the headsets under charging.

When the headset is fully charged, the light is off.

- A single light means less than 25% power
- Two lights on means 25~50% power
- Three lights on means 50~75% power
- All four lights indicate that the charging box is fully charged

When the charging box is charged, the four lights of the charging box gradually turn on, that is, when the power supply is less than 25%, only one light turns on. When the power supply reaches 25-50%, there are two lights on. When the power supply reaches 50-75%, three lights turn on, and when the power supply is full, four lights turn on (indicating that the charging box is full at this time).
