Definition of the plugin:

A plugin is a piece of software containing a group of functions that can be added to your website. It can extend functionality or add new features to your websites.

Purpose of using a plugin:

- It makes it easy for you to add features on their website without writing a single line of code.
- Reduce the Integration effort and time.
- Reduce the errors and bugs that made by the developers.

Before Starting the Integration, you should follow the below steps:

Account Activation:

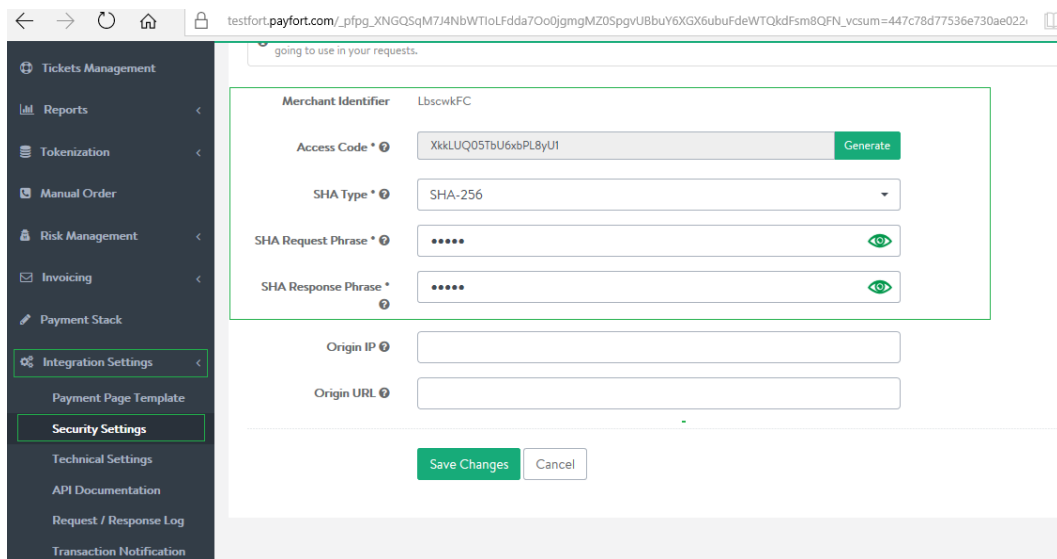

1.1 : Account activation:

The first step you need to do is to access your Payfort test account and activate it. You should be received an email from Payfort with a link to activate your account. Open that link and generate your new password, then set the security question and security image to complete the login step. Please contact merchantsupport-ps@amazon.com to get your test account access.

1.2 : Security Settings:

After that go to “**Integration Settings**” in the left menu and choose “**Security Setting**”, then you will be able to see the below configurations such as (Access code, Merchant Identifier, ..etc.)

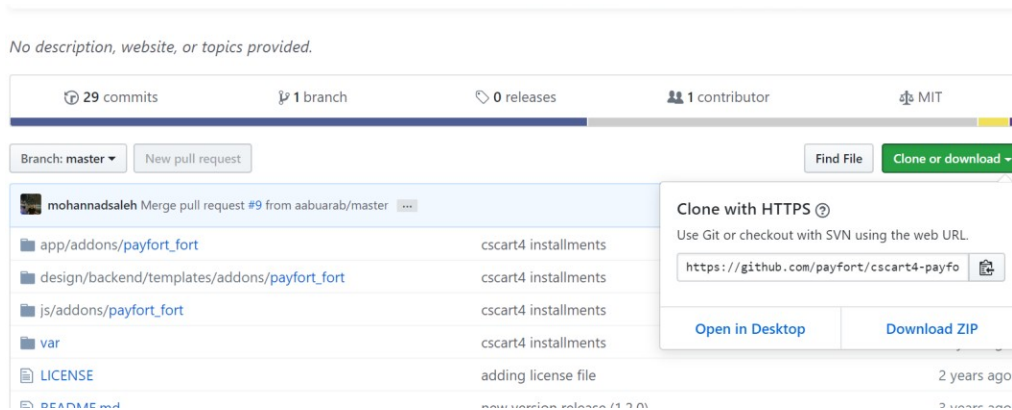

Note: You will need this information later on, while doing the plugin configuration setup.

Plugin installation:

2.1 : Download the plugin:

You need to download CScart4 plugin from the below link: <https://github.com/payfort/cscart4-payfort>

2.2 : Install the plugin:

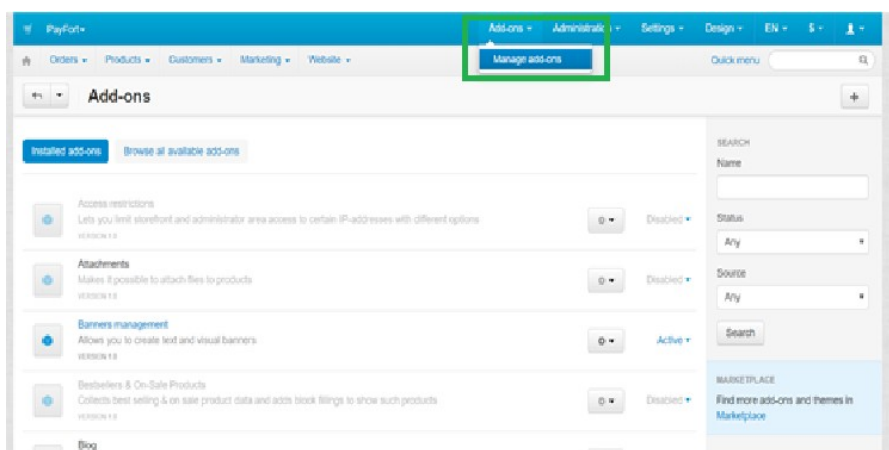

1. To Install plugin please open your administration panel and go to Add-ons → Manage add-ons.
2. Click on the plus sign(+) on the top right
3. Click on local and Choose cscart4-payfort.zip file
4. Click on upload & install

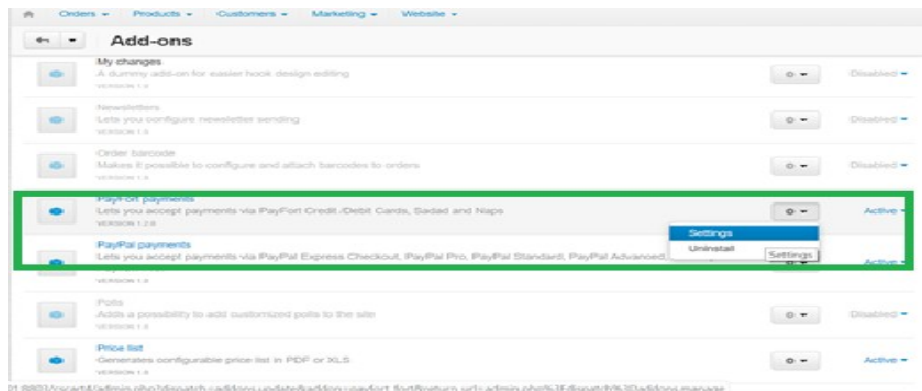

Plugin configuration:

3.1 : Open the configuration page:

After the installation please go to the plugin configuration page from the following path:

- Go to Add-ons > Manage add-ons > choose PayFort Payments > select “Settings” from the drop down list.

3.2 : Configure the plugin:

At this page you will be requested to fill the below information:

- 1- **Language:** you can choose AR, EN or Store language.
- 2- **Merchant Identifier:** You can get it from “**Integration Settings**” then choose “**Security Setting**” [section 1.2.](#)
- 3- **Access code:** You can get it from “**Integration Settings**” then choose “**Security Setting**” [section 1.2.](#)
- 4- **Command:** you will choose either PURCHASE or AUTHORIZATION depends on your agreed method on your deal.
- 5- **Hash algorithm:** : You can get it from “**Integration Settings**” then choose “**Security Setting**” [section 1.2.](#)
- 6- **Request SHA phrase:** You can get it from “**Integration Settings**” then choose “**Security Setting**” [section 1.2.](#)
- 7- **Response SHA phrase:** You can get it from “**Integration Settings**” then choose “**Security Setting**” [section 1.2.](#)

- 8- **Mode:** Please choose Sandbox mode if you are using your test account.
- 9- **Gateway Currency:** You can choose either Front currency or Base currency. If you choose **the Front Currency**, we will consider the currency selected in the store and process the payment through it , if you choose **Base currency** , we will consider the currency setup in your admin panel to process the payments.
- 10- **Host to Host URL:** Please copy the "host to host URL" then go to your test account under the following path :

Integration Settings >> Technical Settings >> choose your payment channel ex:(Merchant page , Redirection) >> paste the URL under Direct Transaction Feedback field.

This URL is responsible to push the payment response and update the order status in your admin panel.

Here below a screenshot from the Technical Settings Tab and the field should be configured there:

The screenshot shows a form with the following fields and options:

- Direct Transaction Feedback ***: Input field containing `https://www.example.com`
- Notification Transaction Feedback ***: Input field containing `https://www.example.com`
- Redirection URL ***: Input field containing `https://www.example.com`
- Return URL Type ***: Radio buttons for POST and GET
- Response Type ***: Radio buttons for JSON and XML

At the bottom of the form are two buttons: **Save Changes** (green) and **Cancel** (white).

MADA Integration:

MADA payment option works on the same Credit Card channel, no need to do a separated setup for this option, all what you need to do is mada branding compliance in your checkout page to verify the integration.

- Please find the below screenshot which shows how you need to display mada in your checkout page: In English and Arabic:

2. With other card schemes as payment method:

- Please make sure to add mada logo in your checkout, please find the below logo.

Test the integration:

You can make a test payment using our test cards, which you can find them from the below link:

<https://paymentservices.amazon.com>

Information to be provided to the Integration team.

Please note that Integration team need to test your website and certify the integration before moving it to live environment. So, please provide a product link from your website to Amazon Payment Services Integration team integration-ps@amazon.com.
