

# API Demo app

As part of the Remote Management API, we have included a Demo app that exercises all available API calls. The APK is one of the CMSs that can be installed when provisioning a stick in the demo environment (see steps 1-4 of the Remote Management API Testing Preparation PDF to prepare your stick with API-capable firmware). Once the firmware is up to date, follow the provisioning steps at <https://demo.signage.amazon.com/> and select API Demo from the CMS list.

Note: Always factory-reset and re-enroll the device before testing so it picks up the latest Demo app.

Demo app source code:
