

## Cree Connected® LED Bulb: How to Reset

If you have successfully set up your compatible hub, but cannot get a Connected Cree® LED bulb to pair with the hub in the applicable app, you can factory reset your bulbs.

### Step 1

Install your bulb in a light fixture and turn it on. (For best results we recommend installing the bulb where you can turn the power off at a wall switch.)

### Step 2

Turn the light switch on at one second and off at two second intervals (1second on : 2 seconds off) until the light blinks once to indicate it has reset. This should happen at the 4th full on-off cycle.

### Step 3

Turn the light off and pair the bulb with your hub via the mobile App.
