

Instructions For Use

How It Works

The crystals work to absorb moisture and odors and start dehydrating solid waste.

Tips for Maximizing the Life of Your Crystal Litter Trays

1. Place the ScoopFree litter box away from areas of high humidity, such as bathrooms, showers, and basements. Since the crystal litter controls odor by absorbing moisture, having extra moisture in the air will shorten the life of the tray. Try placing it in a room with moving air to pull away moisture, like a room with a fan.
2. If your cat consistently urinates in the same spot, try stirring the crystals occasionally to help distribute saturated crystals.
3. Cats with diets that are high in crude fiber and ash content will produce more solid waste, which can prematurely fill the waste trap. Consider changing your cat's diet to a food with no byproducts or fillers.
