### FREEZING TIME AND BOWL PREPARATION

The freezer bowl must be completely frozen before you begin your recipe. Before freezing, wash and dry the bowl. The length of time needed to reach the frozen state depends on how cold your freezer is. It is recommended that you place the freezer bowl in the back of your freezer where it is coldest. Be sure to place the freezer bowl on a flat surface in its upright position for even freezing. Generally, freezing time is between 16 and 24 hours. Shake the bowl to determine whether it is completely frozen. If you do not hear the liquid within the bowl moving, the cooling liquid is therefore frozen. For the most convenient frozen desserts and drinks, leave your freezer bowl in the freezer at all times. Use the bowl immediately after removing from the freezer. It will begin to quickly defrost once it has been removed from the freezer. Reminder: Your freezer should be set to 0°F to ensure proper freezing of all foods.
