

Directions

Your new Travel Dripper Cup is the easiest way to make coffee bursting with flavour, at home or on the go.

For your first cup, try 20g/0.7oz of medium/coarse ground coffee and 320ml/11oz of water (you can adjust these ratios to taste next time). Use a water temperature of 200°F / 94°C.

1. Place the metal filter inside the cup and fill it with medium/coarse ground coffee.
2. Slowly pour hot water over the grounds in a circular motion until evenly wet.
3. Wait for the water to filter through, then top-up until your cup is nearly full.
4. Remove filter cone, secure lid, sip extravagantly.

For more information, see our blog post 'Beginner's guide to pour over coffee' on our website or drop us an email:

Warnings

- Ensure lid is properly fitted to avoid spills
- Your cup, lid and filter are designed to be used together. We don't recommend using them for any other purpose (e.g. don't use the lid as a hockey puck)
- Don't use for carbonated drinks (unless you like cleaning up sticky messes)
- NOT SUITABLE FOR DISHWASHERS. Warm, soapy water works best. Avoid bleach or chlorine
- Your filter has a fine, delicate mesh so take care when cleaning it. Rinse and sponge clean. Avoid brushes (think bathing a baby)
- Wash before first use
- DO NOT MICROWAVE (note the CAPS - this is important). Do not freeze
- KEEP HOT LIQUIDS OUT OF REACH OF CHILDREN/ PETS/THE BUTTERFINGERED
