For people who are sensitive to certain materials

We have ensured that all materials adhere to existing regulations and have passed relevant testing and certification. Furthermore, we keep committing to using safer and more comfortable materials which goes beyond those requirements.
A small number of people will have specific reactions to certain materials. This can be due to allergies, environmental factors, extended exposure to irritants such as soap, sweat and cosmetics, or other causes. If you know you have allergies or other sensitivities, please be aware that Oladance Wearable Stereo contains the following materials:

[Nickel]
Some metal parts of Oladance Wearable Stereo contain a certain amount of nickel. However, they all satisfy the European REACH regulation’s strict nickel restrictions. Our users will be rarely exposed to these parts. Therefore, while nickel exposure is unlikely to be a problem, users who are sensitive to nickel please still be aware of the potential.

[Acrylates]
The adhesives used in Oladance Wearable Stereo contain trace amounts of acrylates. Many consumer products that come in contact with the skin contain acrylates, such as contact lenses. Some people may be sensitive to acrylates, or may develop sensitivities after using it for a period of time. Oladance Wearable Stereo has been designed to avoid direct skin contact with acrylate containing parts.

If you experience redness or any other irritation, it is recommended that you consult your physician before continuing to wear the product.
