

INSTRUCTION MANUAL

CAT. 60610 Zerostat Anti-Static Gun

The Zerostat Anti-Static Gun produces negative and positive ions that couple with the positive and negative static charges on an object's surface, effectively neutralizing them.

Instructions:

1. Hold the Zerostat Anti-Static Gun about 300mm (12 inches) away from the object.
2. Squeeze the trigger slowly; a powerful stream of positive ions projects over a spread of about 400mm (16 inches).
3. Release it slowly, and negative ions are produced.

The Zerostat Anti-Static Gun lasts for at least 50,000 trigger operations, and requires no power supply, batteries, or refills.
