

## **QUICK START GUIDE**

**Rocketbook Everlast** comes with 1 Everlast notebook, 1 Black Pilot FriXion pen, and 1 washcloth.

1) **Download the Rocketbook app.** It is currently available for iOS in the Apple Appstore and for Android in the Google Play Store.

2) **Pairing symbols.** The Rocketbook system features seven symbols that appear at the bottom of each Rocketbook page. Each symbol can be assigned a unique destination (Email, Google Drive, Slack and more) by marking the pairing symbol at the bottom of the page. You can then connect a symbol to a cloud service by selecting “Destinations” and tapping any of the symbols – this locks in that symbol to that cloud service.

3) **Choose your send preferences.** After you have set up your basic destination, you may choose three additional preferences around how you prefer to receive your files.

- **Auto-Send.** For a faster and more seamless “scan and send” experience, the app can send your scans automatically. If you prefer to confirm before sending your files, just be sure to tap the green checkmark after scanning!
- **Send as PDF.** The app defaults to sending scans as JPEGs. If you’d like to send scans as PDFs, turn on Send as PDF.
- **Bundle Notes.** You can combine individual scans into a combined PDF by switching on Bundle Notes. This must be done on a per destination basis. Please note that Bundle Notes only works when files are converted to PDFs, so you’ll need to switch that option on as well.

4) **Scan.** The app will automatically scan the page when you point the camera at your Rocketbook. You don’t need to press a shutter button. Works best in a well-lit environment. Scan close to 90 degrees above the page.

### **How does it work?**

Use Everlast with pens, highlighters and markers from the Pilot FriXion line and let the ink dry for 15 seconds to bond to our specialized paper. To re-use, just wipe pages with a damp cloth, and watch them erase like magic.
