

Q1 : How to improve radio reception ?

1. Using an external antenna is the most effective way to improve reception. Extending the antenna allows you to avoid the impact of cement and steel buildings on reception indoors. When listening to AM, you need to stay away from electrical appliances. If necessary, it is recommended to buy an AM loop antenna to reduce the noise in the AM signal.

Q2: Can TR618 be used as an emergency radio?

2. Yes, sure. Reteless TR618 supports 3 bands of AM FM SW and can receive external information in an emergency. In addition, it can be driven not only by 110V AC but also with 3 x D batteries, which is very convenient in emergency situations.

Q3: What function can TR618 play with TF card?

3. The "REPEAT" button can set a single play or all play; the "PLAY/PAUSE" button can play and pause the music; the "PREV" and "NEXT" buttons can switch the music one by one.
