

# american kitchen®

## PRODUCT INFORMATION

American Kitchen cookware is made from tri-ply galvanized stainless steel with an inner layer of natural aluminum, making our pans both durable and incredibly temperature responsive as you cook.

The Eterna® nonstick coating is incredibly smooth and thicker than other non-stick alternatives, meaning it will hold up for years to come. The non-stick coating is made from a PTFE-based material, classified as a polyfluoroalkyl substance (PFAS). As regulated by the state of California, consumers have a right to know which chemicals are used in their products. PFAS are a large, complex group of manufactured compounds widely used to make everyday consumer and industrial products, including non-stick coatings.

For more information about the chemicals used in this coating, visit [PPG ETERNA® Coatings | PPG Industrial Coatings](#).

American Kitchen products made with the PPG Nonstick Eterna® coating include:

- AK008-GBNS 8" Nonstick Skillet
- AK010-GBNS 10" Nonstick Skillet
- AK012-GBNS 12" Nonstick Skillet
- AK010-EPNS 10" Nonstick Casserole Pan
- AK012-EPNS 12" Nonstick Casserole Pan
