

FAQ'S

How do I install FloorPops?

Follow our step-by-step instructions of how to install peel and stick FloorPops

Are FloorPops really permanent/are they removable?

To be durable enough to withstand foot traffic, FloorPops were designed with a strong adhesive. This means that they are NOT removable in the sense that our peel and stick NuWallpaper or wall decals are removable/temporary. They can, however, be removed should you choose to- we recommend using a scraper or an object with a thin, flat surface to wiggle under a seam and pop a corner of the tile up.

Can you install FloorPops over existing tile?

We do not recommend installing over grouted tiles or floating wood laminate, as the base layer would not be secure. If you choose to install over ceramic or grouted tiles, we recommend filling all grout lines with thin-set tile mortar before installing FloorPops over existing tiles to create a flat, smooth surface.

Can you install over plywood or concrete subfloor?

Yes! Subfloors and underlayment make the perfect base layer for optimal tile adhesion. For additional adhesive strength, treat the installation surface with a latex primer.

Can I use FloorPops as a backsplash?

We do not recommend installing FloorPops on walls.
