

Troubleshooting Guide

To wring the Vileda Turbo mop and use the pedal correctly, place the wet mop into the wringer and hold the handle loosely between your fingers, making sure the handle is in a vertical position.

Press the foot pedal 5-10 times to spin the wringer or until the mop has reached the desired moisture.

Always ensure that you do not fill above the “Max” indicator on the inside of the bucket as this will prevent the mop from wringing correctly.
