

## Instructions

Before starting, locate a clean area free of stones or other sharp objects. Unroll the product so it is laid out flat, and locate your pump.

Inflation:

- Unscrew the “double valve cap” and make sure the “quick deflation cap” is not moved or accidentally unscrew. Check that the “quick deflation cap” is still securely tightened on the valve.
- Use a hand or foot operated air pump to inflate the boat. Do not use high-pressure air compressors. Adults should inflate the chambers following the numerical sequence marked on the valves. It is very important to follow the numerical sequence; failure to do so will result in an improperly inflated boat. Fill each chamber until it is stiff to the touch but NOT hard. Use the enclosed ruler to check the main chamber for proper inflation. DO NOT OVER INFLATE. Fill with cold air only.
- Close the “double valve cap” back, tighten the cap securely. If air is escaping, make sure the washer under the double valve cap is correctly in place.

**IMPORTANT:** Air temperature and weather condition do affect the internal air pressure of inflatable products. In cold weather the product will lose some pressure due to the fact that the air will contract. If this occurs, you may want to add a little air to the product. However, in hot weather, the air will expand. You must let some air out to prevent the product from bulging and failing at the seam due to overpressure.

**Repair:** Through constant use you may occasionally puncture your kayak. Most leaks only take a few minutes to repair. First locate the leak; soapy water will bubble out from the source of the leak. Thoroughly clean the area surrounding the leak to remove any dirt or grime.

Cut a piece of repair patch large enough to overlap the damaged area by approximately 1.5 cm (1/2”). Round off the edges, and place the patch on the damaged area and PRESS DOWN FIRMLY. You may want to use a weight on top to keep it in place.

Do not inflate in 30 minutes after patching.

If the patch does not hold, you can purchase a PVC or silicon based glue for repairing camping mats, tents or shoes from your local market to patch your boat, please refer to the instruction of the glue for patching.
