

## **FAQ**

### **Can I mount an outboard motor onto my INTEX boat, if so what size motor is recommended? Does INTEX recommend any specific brand?**

It depends on the model and year of the boat. Check your owner's manual and your boat to see if the motor mount fittings are present. INTEX supplies the transom mount trolling motor (Item #68631/E) for Challenger 3, Seahawk 2,3,4, Excursion 3,4,5, Seahawk II and Mariners boats. We do not recommend any specific brand of motor since we do not distribute them (Reference trolling motor). Please consult your local marine dealer for suggestions. However, INTEX does recommend that the outboard motor that is used (electric or gas) not exceed specification on the attached file.

### **What can I do if my boat is leaking air?**

Small pinholes and small puncture leaks can be fixed with the repair kit included with your boat. It will fix leaks or punctures of 5 cm (2 in) maximum. If the pinhole or puncture is located in a seam it is not repairable, the boat will have to be replaced. A replacement will be issued by the original place of purchase in accordance with the store policy. See instructions in your Owner's Manual. We do not recommend repairing a leak bigger than 5 cm (2 in) for safety reasons. You can also call Intex Consumer Services (310) 549-8235 or order online @ [www.intexcorp.com](http://www.intexcorp.com) to obtain a repair patch kit part# 10860.

### **Other than a motor mount kit is there any other way to mount a motor to Intex boats?**

No, the motor mount kit is made specifically for Intex boats.

### **To register my boat, I was told that I would need a Certificate of Origin. Where do I get the document? (For U.S./Canada customer only)**

Before obtaining the Certificate, please have the boat Hull Identification Number (you may find it at the bottom of the capacity label on the stern of the boat) and model name ready, and then click the following link to obtain your Certificate of Origin.
