

## Logitech G433 7.1 Surround Gaming Headset

### Troubleshooting :

#### **No sound coming from gaming headset**

If you aren't hearing audio from your gaming headset, try the following:

- Make sure the headphone cable (marked with green, and with an image of headphones on the jack) is firmly connected to the audio output jack of your source device.
- If you're connected to a computer, be sure you've properly configured your computer's sound output settings (see your computer's documentation for more information).
- Try plugging the headphone connector into a different device, like an MP3 player, or into a different computer.
- Try adjusting the volume or toggling the mute button on your headset, device, and application.
