

User Manual: Electrostatic Pet Hair Remover Glove

Thank you for choosing our eco-friendly solution for a hair-free home!

1. How to Use

Surface Cleaning: Put on the glove and secure the wrist strap. Swipe your hand flat over furniture, clothing, or carpets. The electrostatic charge will pull hair and lint like a magnet.

Precision: Use the 5-finger design to reach deep into crevices, corners, and sofa gaps.

Pet Grooming: Gently stroke your pet in the direction of hair growth to remove loose fur and provide a relaxing massage.

2. Cleaning the Glove

Manual Removal: Simply peel off the collected hair "mat" from the glove surface and discard.

Deep Clean: For dust or heavy dirt, rinse under running water or toss it in the washing machine (30° C / Cold wash).

Drying: Air dry only. Do not tumble dry or iron.

3. Pro Tips

Keep it Dry: The electrostatic effect works best when the glove and surfaces are completely dry.

Speed: For large areas (like beds), use long, firm strokes to clean 3x faster than standard rollers.
