

Instructions

Tips: When you get the small keyboard, the keys are not set. If you need to set other keys, you need to download the setting software.

Errors

What if my keyboard doesn't working?

Try to plug your device into your USB port which at the back of your box.(ports on the motherboard)

Press a button but nothing happened (open ZDDKeyboardSetter.exe searching for device,but result in "can not found device"): Maybe your device is not connected to your PC, unplug your device and plug it into another port.

The device worked correctly, but ZDDKeyboardSetter.exe keep failing to find your device:

Change your a port will temporarily solve this problem.

Go to Windows device manager and reinstall the USB driver. (details below)

Plug keyboard to the computer.

Right click on "This Computer", go to This Computer > Manage (Windows11 : This Computer>Show more options> Manage).

Find "Device Manager" and click it, then go to "Universal Serial Bus controllers" , and you will see many "USB Composite Device"s.

Double click on one of them, a setting page will pop up,then click "Event" Tab.

Find the device with VID_5131 PID_2019 and uninstall the driver.(Right click on corresponding "USB Composite Device").

Re-plug in your device.

Notice

Non-Windows system usage:

The Keyboard should finish setting on windows pc first ,Then plug into other OS. If you are using MacOS, the "Win" key is equal to "command" and "alt" = "option".

Software related:

If you have any questions, please contact us via Amazon in time, and we will provide you with solutions.

Download link: <http://8.210.3.182:9999/man/Readme.html>

(In the link, there are buttons for downloading the driver and graphic descriptions for the demonstration)

After downloading, unzip all files in the folder. After decompression, you can see a program named KeyboardSetter.exe.

Supported function modes:

Default mode: keyboard mode.

Mouse mode: move the cursor/click the mouse button.

Multimedia control: control media playback, etc.

One key password: One key to enter the preset password.

Macro: A Macro is an array of keys sending to computer sequentially.

(eg. password,command,hotkeys.) With Macro, you can achieve some certain purpose by click one switch on the keyboard.

1. This keyboard supports multiple function modes.
2. Each button can be set to a different function mode without affecting each other.
3. The button function can be set by yourself, there is a special setting program (click our driver download link to download), and you can repeat the setting.
4. The setting is saved in the keyboard, no need to set again to replace the device
5. Support Windows, Linux, MacOS.

how to use:

1. Plug your device into the computer, after plugging in, the LED on the device will light up.
2. Double-click "KeyboardSetter.exe"
3. If you buy 2 keys, then the setting is KEY1/KEY2. If you buy 3 keys, then the setting is KEY1/KEY2/KEY3. And so on
4. Find the representative button you want to configure, and then click it. After clicking it, it will turn red, which also means that you are editing this KEY, and the soft keyboard will be displayed.
5. After you set 1 key, you need to click the download button to download them to the device while plugged in the device.
