INSTRUCTIONS (English):

1. Applications: The Eva-Dry Renewable Dehumidifiers are designed to remove moisture from closets, cabinets and other spaces. The crystals will remain active for 10 years and we offer a 5 year limited manufacturer's warranty. See *Warranty Card* for more information.

2. Regeneration: When the crystals inside the indicator window are BLUE, the Eva-Dry Dehumidifier is fully charged and ready to absorb moisture.

When the Eva-Dry Dehumidifier is in need of re-generation the crystals inside the indicator window will be PINK. Depending on the level of moisture in an area, a fully charged E-333 unit will last on average 20-30 days before regeneration is needed (results may vary depending on the level of humidity). E-500/EH-500F unit will last an average of 30-60 days before regeneration is needed. To re-generate the unit, simply plug it into a standard outlet or outlet strip (refer to illustration 1) where the excess moisture can be released and distributed (i.e. utility room, garage, well-ventilated area). Leave the unit plugged in overnight; the E-333 for 10-12 hours and the E-500/EH-500F for 12-14 hours. The Eva-Dry Dehumidifier will heat up (this is normal) during the re-generation process. When the drying process is complete, the crystals inside the indicator window will turn BLUE and the unit is ready to use again.

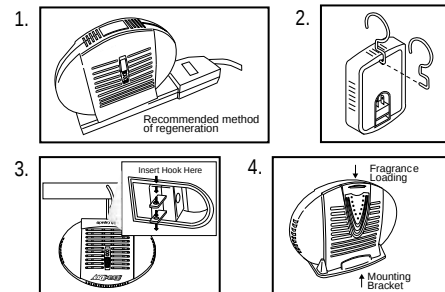

3. Hanging Instructions: The E-333 includes an optional hanging hook (refer to illustration 2). Insert the hook into supporting hole and hang onto a clothing rack. The E-500 also includes an optional

hanging hook (refer to illustration 3). The EH-500F includes an optional easy mounting bracket. The attachment includes 2 screws, 2 anchors and double-sided tape (refer to illustration 4).

4. Fragrance Refill: Take off protective wrap to release Fresh Fragrance cartridge and place on back compartment of the Eva-Dry EH-500F (refer to illustration 4). Replace fragrance cartridge every 30-60 days. The Fresh Fragrance cartridge is not required to operate.

Caution: Avoid direct contact with water. Do not drop or dismantle. Do not plug Eva-Dry in while the indicator window is BLUE. Do not leave plugged in for more than 18 hours.
