PRIMING INSTRUCTIONS

Ensuring that the pump is properly primed prior to the initial operation and after refilling the unit is usually the key to the correct distribution of the liquids. The dispenser utilizes a true pump system and the priming instructions are included with each product. The required steps are as follows:

1. Depress the button. Place your finger on the nozzle to block air flow and thus draw liquid into the pump. Release button. Remove finger.
2. Repeat several times to allow liquid to fill the pump chamber.

Make certain that if the pump is removed from the bottle, the tiny ball valve in the bottle stays in place. If the ball is lost, the pump will not function. If you find you are still having problems, please feel free to call our Customer Care Centre at 1-800-487-3300 and one of our Product Experts will be pleased to assist you.
