

Questions About Glossy Mod Podge

1. How do I know if I should pick Mod Podge Gloss – or Matte – or Satin? Which is best for my project? There isn't a "best" for your project when it comes to these formulas. *They are exactly the same* with the exception of the finish – aka, the level of shine.

2. What is the finish of this formula? Glossy – meaning, shiny in the light.

3. What surfaces can I use this formula on? Wood, canvas, tin, metal, terra cotta, and more. If fabric is your base, use [Fabric Mod Podge](#).

4. Can I use this to [decoupage shoes](#)? Or for [outdoor items](#)? Or for clothing? I highly recommend selecting the appropriate formula for your purpose using this guide [HERE](#).

The various formulas are not the same thing with a different bottle label. The specialized formulas have different ingredients, and different prices too. There's a reason for that.

5. Do you ever use Mod Podge Gloss? What for? Yes I do. I use it for glass projects especially, because glass is shiny, and I like my finish to match the surface.

I also use it when I'm in the mood for shiny. Sometimes a project calls for that, like a [Halloween project](#) or wall art. I let how I'm feeling that day dictate the finish!

6. Sometimes my Mod Podge Gloss is tacky. Why – and how do I fix it? [This formula tends to be more tacky](#) than others when dry, especially in a humid environment. I lived in Georgia for a long time, so I always have to use a sealer with it on top – either a spray or brush-on (as long as it's clear acrylic) will work.

Otherwise it can take months to fully cure. CURING is different than drying. Dry is dry to the touch. Curing is when it's completely, fully dry in all layers . . . and it's no longer tacky.

7. Where can I buy Mod Podge Gloss? This is the typically the top selling and most widely available formula, and that means it's just about everywhere: Amazon, Home Depot, [Dollar Tree](#), Walmart, Target, Michaels, Jo-Ann, Hobby Lobby, AC Moore, and on and on. It's not hard to find this formula AT ALL. Learn [where to buy Mod Podge here](#).
