Refrigerant leakage contributes to climate change. Refrigerants with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to (R290). This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be (3) times higher than 1 kg of CO₂, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product you
