

This list is used to determine which Hormex Rooting Powder strength is best for your plant variety. If your plant is not listed, determine the hardiness of the plant and choose a strength based on that. #1 is for easy to root plants, while #8 is for harder to root plants. Most varieties use #1 or #3. Citrus fruit is harder to root and would use the #8. If you still have questions, please contact us at info@hormex.com.

A-L (sorted)	M-Z (sorted)
African Violet (Saint Paulina)#1	Magnolia (Magnolia)#8
Ageratum (Ageratum)#1	Maidenhair Tree (Ginko Biloba)#3
Aloe Juvenna (Hormex Liquid)	Mango (Mangifera Indica)#8
Apple (Malus)#8	Manzanita (Arctostaphylos)#8
Arbor-Vitae (Aurea Nana)#3	Maple (Acer Japonicum Palmatum)#8
Arbutus (Epigaea Repens)#8	Matrimony Vine (Lycium Halifolium)#8
