

Product Compliance Guidelines

Amazon Product Safety may choose to review certificates and test reports for products sold on Amazon.com or any other Amazon affiliated website. Vendors and Sellers must review and understand the below Amazon Requirements before making any submissions. Any products marketed or sold on Amazon.com or any other Amazon affiliated website must comply with all applicable laws, mandatory standards, and Amazon policies.

1. Products may be regulated by one or more government agencies and Amazon requires products to be compliant with all applicable regulations.
2. Independent 3rd party testing at CPSC accredited laboratories is required for all CPSC regulated products. To access a list of CPSC accredited laboratories, visit the CPSC website: <https://www.cpsc.gov/cgi-bin/labsearch/Default.aspx>. For Children's Products such as toys and apparel you must also be able to furnish a Children's Product Certificate (CPC) for the product. Details about Children's Product Certificates can be found on the CPSC website: <https://www.cpsc.gov/Testing-Certification/Childrens-Product-Certificate-CPC>
3. To evidence electronic safety certification, the certification with the name of the certifying agency and file number should be included. The submitted product must be represented by a unique model number and should match the model number listed in the certification. This certification must be completed by an ILAC-MRA approved ISO 17025 certified testing laboratory.
4. Amazon accepts only passing test reports for products tested from a production run. Testing completed on pre-production or prototype products will not be accepted.
5. Vendors and Sellers should direct all questions regarding currently applicable laws, rules, standards, and bans for their products to their testing laboratory and own legal counsel.
6. Amazon reserves the right to request additional compliance documents and information for your products.

The submission of passing test documentation does not guarantee approval for your products being listed on Amazon.com or any other Amazon affiliated website.
