

Instructions & Troubleshooting

(As of 4/10/2025)

The Naväge Nose Cleaner only works with new, unused Naväge SaltPod capsules.

This is critical: if the lid is reopened, the power button will no longer work with the existing SaltPod, even if you reclose the lid. The power button will be locked out and won't function. This is a safety feature to prevent discomfort during rinsing. See the link below to "Troubleshooting: Power Button Problems" on how to repair it. Remember, no peeking!

Always use water that is either distilled, micro-filtered (.2 micron), freshly opened commercially bottled, or previously boiled and cooled to body temperature.

For additional information on how to set up and operate your Naväge Nose Cleaner, and for troubleshooting tips, visit one of the links below:
