

Video Card will not show anything

There may be a few reasons. This may be due to a compatibility issue. Check to make sure your motherboard BIOS is up to date. It can also be related to a power supply. Check your power supply to see if it meets the minimum power requirements. Check if the display cable is working correctly and also the monitor itself. You can also try reseating the graphics card onto the motherboard. If none of the above resolve the issue, please contact us.

Window 10 not recognizing graphics adapter

Windows 10 build versions older than 1607 requires to be updated in order for the drivers to recognize the graphics card.

Also, users may need to update the Windows to latest version before then can install the latest Nvidia GeForce Drivers.
