

Instructions

Expandable Door Hinge

1. Remove existing hinges from door jamb and door. **SAVE ALL SCREWS.**
2. Attach the door hinge section to the door's edge.
When mounted, the hinge pin should be positioned closest to the door frame.
3. Attach the other side of the door hinge to door jamb (counter sunk holes facing you). Use the screws removed in Step 1 and screw into existing holes. Repeat this step to attach second hinge.

NOTE: The door hinge pin may need to be removed and repositioned depending on which side of the door frame the door hinge is mounted. To avoid injury, the pin should always be inserted from the top of the hinge to prevent the hinge from separating.
