1

Congratulations on purchasing our Tape King packing tape gun.

Insert roll of tape into Tape Roll Holder (H). Make sure adhesive side is facing down before peeling off tab.

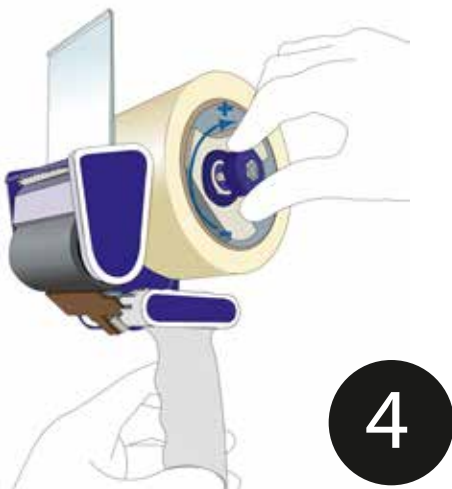

2

Remove the blue plastic blade cover (B). Be careful and take caution while removing to avoid cutting yourself over the sharp blade. Use your fingers or a small tool to pry it off if stuck.

3

Pull tape out using the starting guide with arrows. Line tape between black roller (C) and metal clasp (D). Make sure sticky side is facing down. Pull tape out and use blade to make the first cut before taping boxes.

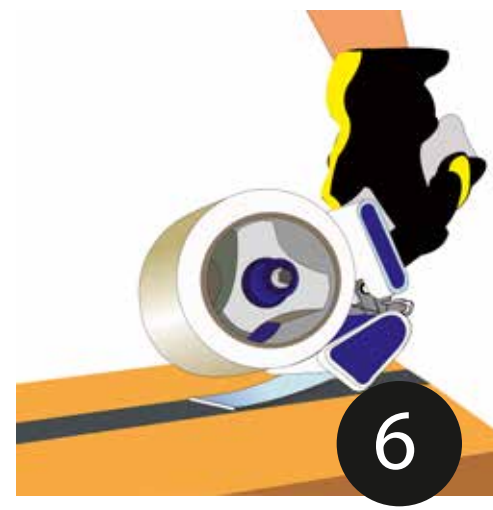

4

Adjust the blue knob (G) clockwise to tighten brake tension or counter clockwise to loosen. We recommend turning it clockwise a few times but do NOT overtighten. Adjust to your liking. This controls the roller speed while dispensing tape.

5

If using a new roll, pull tape up and out and make a cut with the blade (step 3). Begin taping your box, carton, etc.

6

TIP: Use the clear rectangular swiper (A) and tilt forward while cutting the tape off. Don't use too much force or it may break. Use swiper piece after taping, press down on the tape in a swiping motion to create a better seal.
