Installation Instructions

1. Prop it up using a stick.

2. Add sand or stones to enhance its stability.

Friendly Tips:

- 1. Please change the position of the owl at all times to prevent birds from getting used to it.
- 2. Birds may not be scared if they can't clearly see the owl. Ensure it is placed in a prominent location where birds are likely to notice it, such as in the center of a garden bed or near bird-frequented areas like bird feeders.
- 3. Place the product at an appropriate height. If it's too low, birds may not perceive it as a threat. A height of around 4 - 6 feet above the ground is often effective, but this can vary depending on the type of birds you're trying to deter.
- 4. Make sure there are no obstructions blocking the view of the owl from the birds. Bushes, trees, or other objects in the way can prevent birds from seeing it clearly.
