

Qardio App and Android compatibility

QardioArm and QardioBase work with [iOS](#), Android and Kindle devices. QardioCore is currently available on iOS only. To use Qardio App or operate one or more Qardio devices, your smartphone or tablet will need to have Bluetooth 4.0 (or later). The Qardio App works with Android 5.0 "Lollipop" (or later) and requires access to [Google Play](#).

List of Android devices validated to work with [QardioArm](#) & [QardioBase](#):

- Samsung Galaxy S4 or later
- Samsung Galaxy Note3 or later
- Google Pixel 1 and 2
- Google Nexus 4 or later
- Motorola Moto X/Droid Turbo
- OnePlus One or later
- Huawei Mate 7 or later

It is recommended to use Qardio App with a validated device to ensure maximum reliability.

Download the Qardio App for Android [here](#).

Your phone or tablet has Bluetooth 4.0 and Android 5.0 (or later), but is not on the validated devices list?

- Let us know by emailing [android \[at\] getqardio \[dot\] com](mailto:android@getqardio.com)
- Your device might still work well with Qardio App, but it is not yet validated

- Amazon Fire HD 7 (4th Gen)

Your phone or tablet has Bluetooth 4.0 but you have an older version of Android?

- Update to the latest Android software version, or
- Contact your phone carrier or device manufacturer and confirm with them the availability of Android 5.0 "Lollipop" (or later) for your device.

Qardio App is a free companion app that operates Qardio devices and keeps all your health data in one convenient place.
