Quick Setup Guide

Smart LED Light Strip 10 m, RGB & Tunable White,
2.4 GHz Wi-Fi, Works with Alexa only

B0CQP7YZQ9

Package Contents

- ▶ LED light strip
- ▶ Power Adaptor
- ▶ Safety manual
- ▶ Controller
- ▶ Joint cable
- ▶ Quick Setup Guide

Set Up the Light Strip with Alexa

1. Download the latest version of the Alexa app from the app store, then log in.
2. Connect the power adaptor controller, and the light strip, then power it up.
3. In the Alexa app, tap **More** from the bottom menu, then tap **Add Device**.
4. Tap **Light**, then tap **Amazon Basics**.
5. Follow the steps in the Alexa app to complete setup. When prompted, scan the QR code on this *Quick Setup Guide* or on the product.

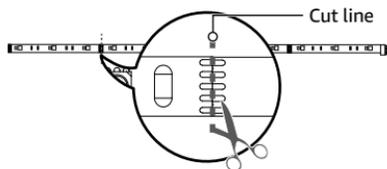

Note: Do not scan the barcode on the packaging. If the QR code scan fails or if you lose this *Quick Setup Guide*, visit www.amazon.com/dp/B0CQP7YZQ9 for the online *User Manual* for more FAQs and troubleshooting instructions.

Trimming the Light Strip (Optional)

You may trim the light strip at specific locations to shorten its length. The light strip is not extendable.

CAUTION: Cutting the light strip at an incorrect location may cause the light strip to stop working.

1. Unplug your light strip.
2. Determine the length you want the light strip to be. Make sure to consider the power cord length and distance to a power outlet.
3. Locate a cut line near your desired length, then trim the end of the light strip at the line with a pair of scissors.

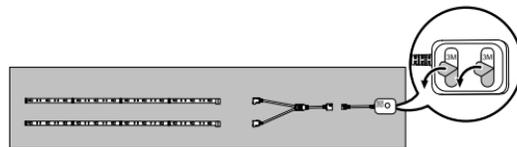

Installing the Light Strip

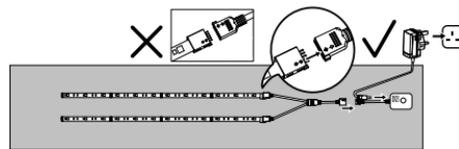

WARNING: Do not plug the power adaptor into an outlet before installation is completed.

CAUTION: Do not keep the lights on for more than three minutes when the light strip is in the rolled-up condition. Please ensure the lights are unrolled before normal usage. Do not bend your light strip along the LEDs and cut lines.

1. Clean and dry a smooth surface for mounting. When choosing a location, consider the position of the controller and distance to a power outlet.
2. Peel off the adhesive backing section by section as you attach your light strip. To avoid damage, do not bend your light strip along the LEDs and cut lines.
3. Place the light strip in your desired location, then push on all sections of your light strip for about 10–15 seconds for a secure hold.
4. Peel the adhesive backing from the controller, then press the controller onto your mounting surface that is less than 0.75 ft. (23 cm) from the strip input side. Do not move the controller after it is attached.

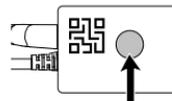

5. Remove the pin-protection-covers from the strips, then insert the strips into the joint cable.
6. Connect the joint cable and the power adaptor to the controller, then plug it into a power outlet.

Using the Light Strip

Control the light strip with the Alexa app or by using the built-in controller.

- Press the controller button once to turn the light strip on or off.
- Press the controller button twice quickly to change the light color.
- Press and hold the controller button for 10 seconds to factory reset the light strip.
