

USB Fingerprint Reader Instructions

I . Add fingerprint

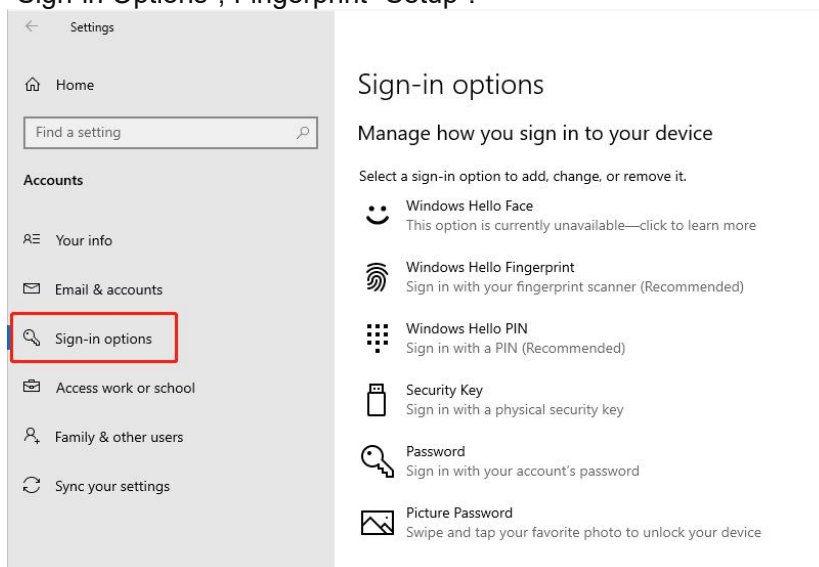

USB Fingerprint Reader only supports legal win10, not supporting illegal ones in principle.

Hint: if your system is illegal win 10, a local administrator account should be created.

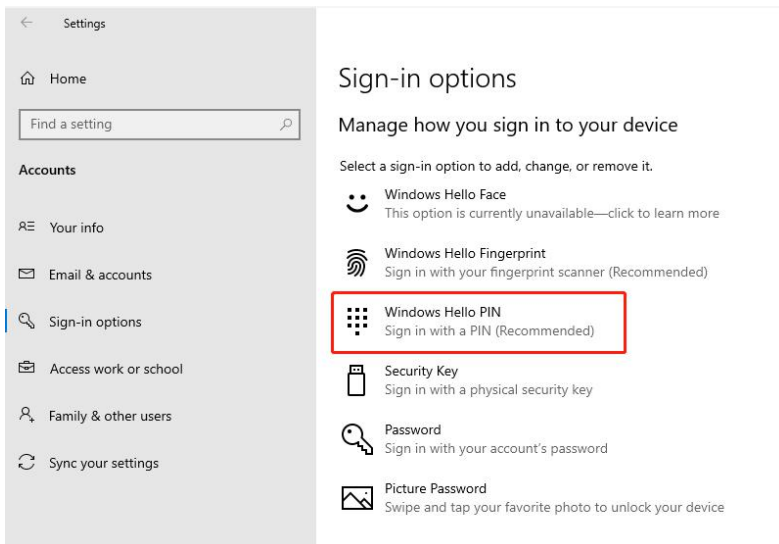

1. Insert the fingerprint reader into the computer;
2. Start from "Settings"=>"Accounts";

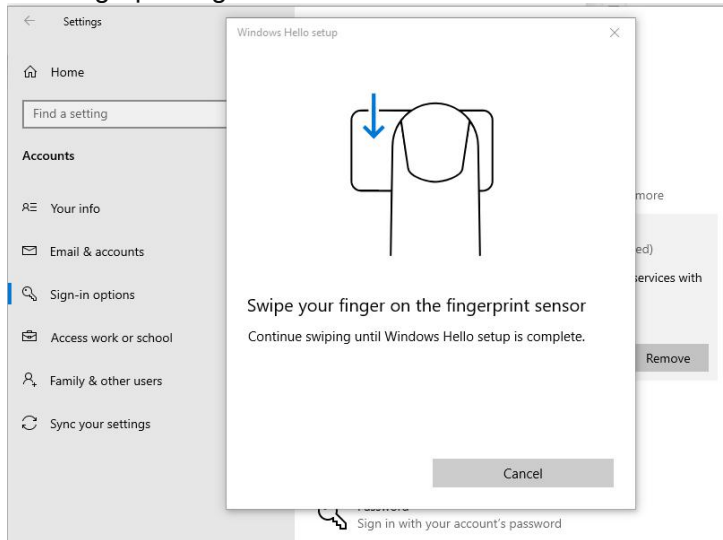

3. "Sign-in Options", Fingerprint "Setup".

4. Set the PIN code.

5. Start fingerprinting.

6. Enroll your fingerprint around 10~12 times (touch, lift).

7. Try to touch your finger by different area to collect larger fingerprint data, easy to identify fingerprint.

II. Install or update driver:

Most cases you don't need download driver, when you couldn't use the fingerprint reader rightly in your system, Please download the driver and install it on your system.

When you use the fingerprint reader, you should delete the device driver with win 10 system.

1. Down load the driver

Driver download URL:

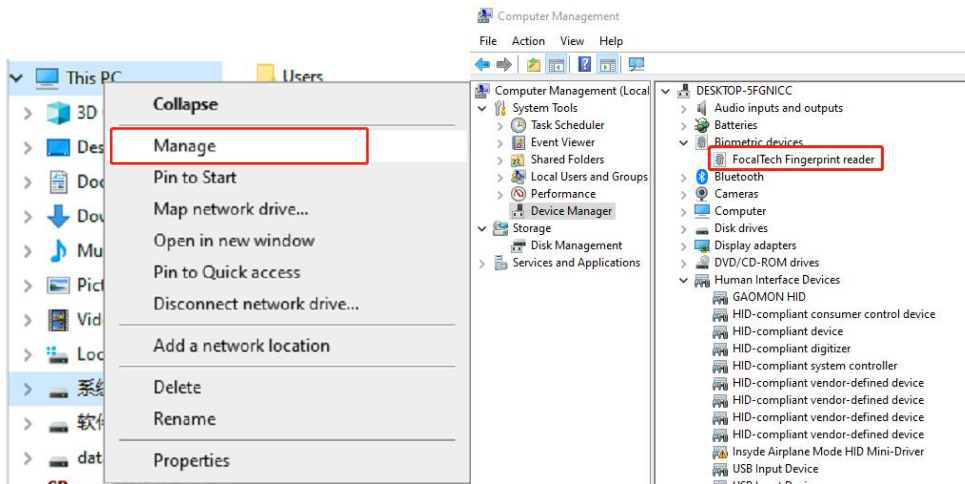

64bit System: <http://www.redma.com.cn/FPDriver64bit.zip>

32bit System: <http://www.redma.com.cn/FPDriver32bit.zip>

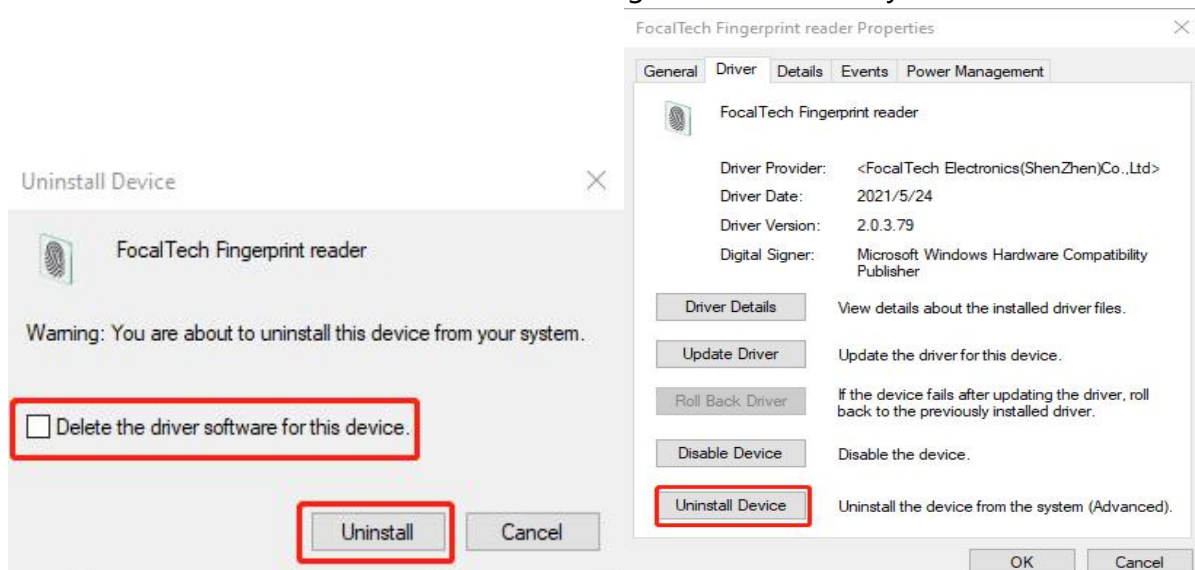

2. Plug the device into the USB interface of the computer, and the red indicator of the device is always on.

3. Move the mouse pointer to "computer or calculator" and lick on the left key of the mouse.

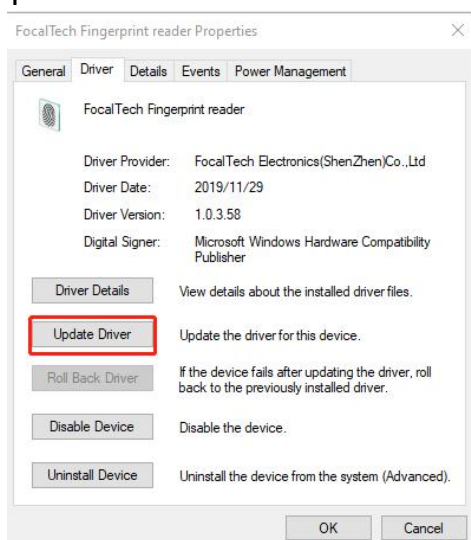

A dialog window will eject and select the red box "manage" .

4. Select "biometric device" to uninstall the original driver of the system.

5. Update the driver.

6. Click “Device manager” and select “other device” named “FT9201Fingerprint”. Store the driver package in disk D or disk E and decompress it. Browse and select the decompressed file program.

6.Installation finishes.
