Intelligent Translation Function

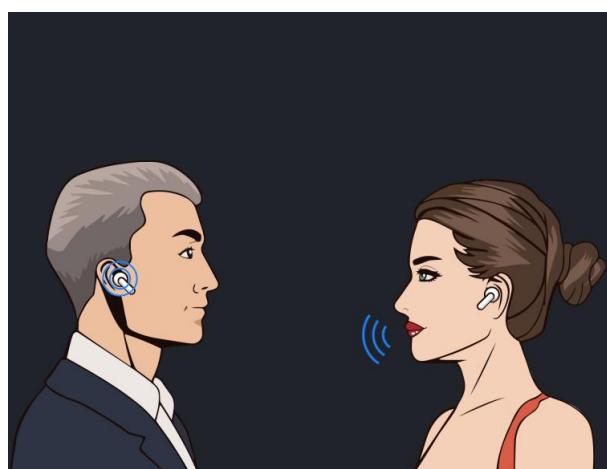

1. AI chat mode

Ear Dance supports 3 translation modes

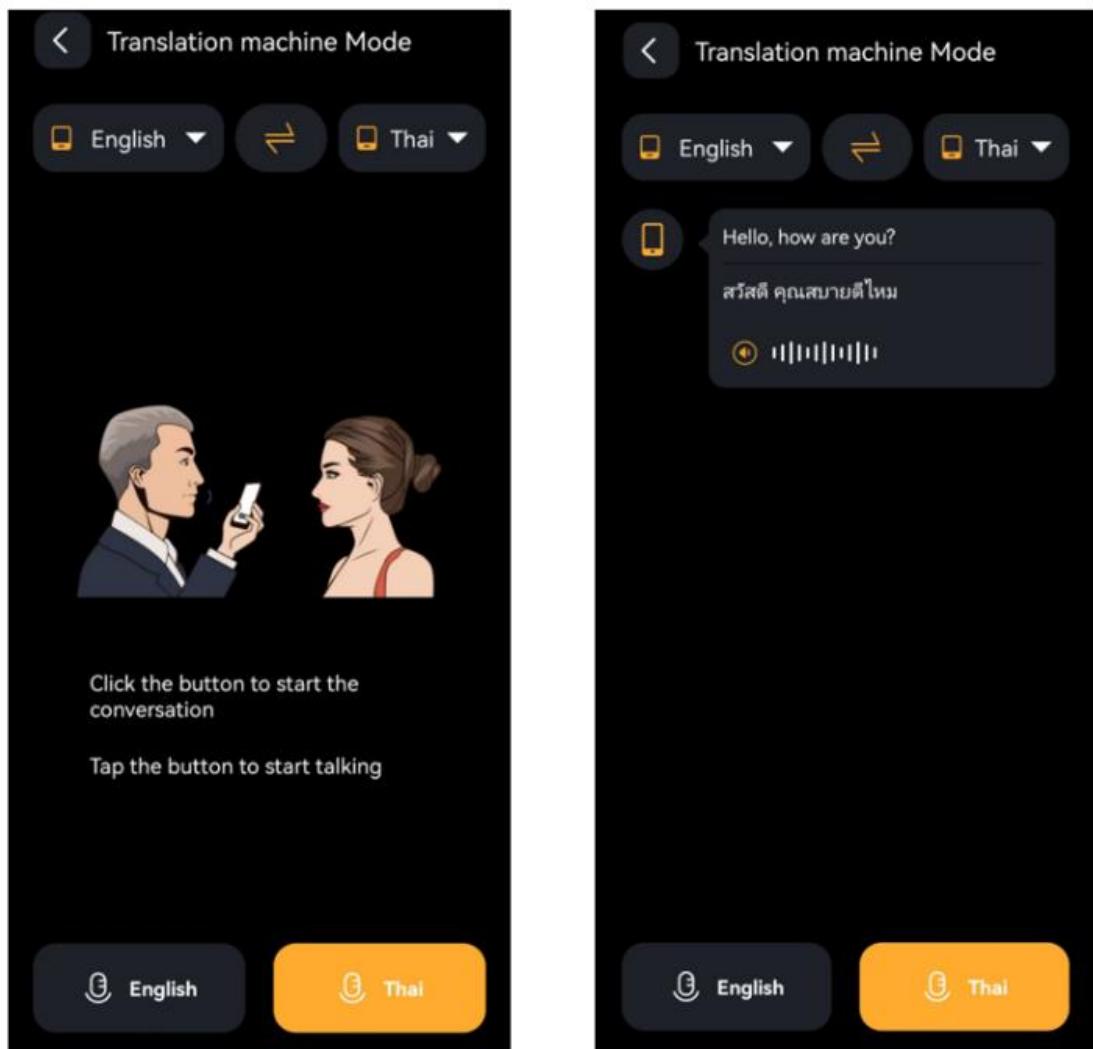

2. Free talk mode

This feature does not require clicking on the phone or headphones. The headphones automatically recognize language, and translate, allowing users to work while translating.

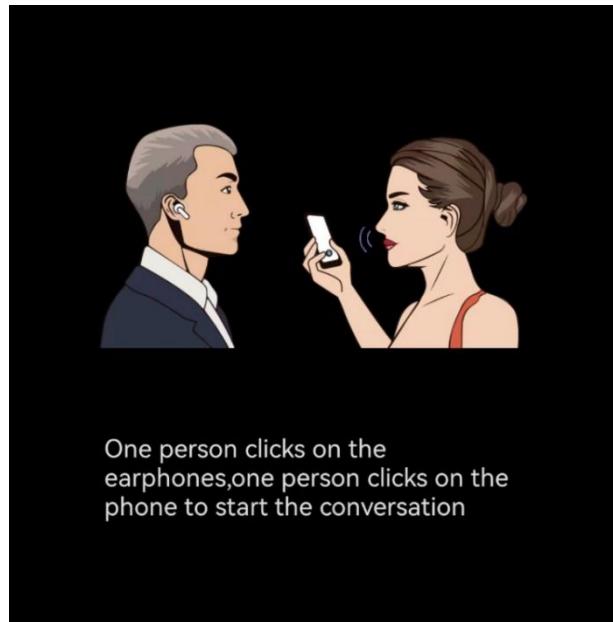

3. Translation machine mode

The operation is like a traditional translator, which can be translated by clicking the language button, and the phone speaker plays the translation sound.

4. Headphones+phone mode

One person wears headphones, while the other uses their mobile phone. Clicking on the headphones or the translation button on the phone will automatically recognize the finished speech, allowing for direct conversation and communication.

One person clicks on the earphones, one person clicks on the phone to start the conversation

Switch language

Supports a total of 134 languages. You can freely switch between your language and the other party's language in the language button at the top of the App.
