

We're Plugable, It's nice to meet you!

We're an American brand. From our HQ in sometimes sunny Seattle, WA, we've taken a different approach to computer peripherals. For starters, the folks who design our products are the same folks who support our products.

From concept to production, we've brought millions of devices to customers around the world. Somewhere along the way, we made this device which brought us to you. And we think that's neat.

USB-C Power Delivery 10-Port Priority Charger Quick Start Guide

Guía de inicio rápido | Guide de démarrage rapide |
Guida introduttiva | Kurzanleitung | クイック・スタート・ガイド

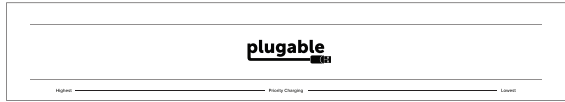

Thank you for your purchase of the Plugable USB-C Power Delivery 10-Port Priority Charger!

The PS-10CC is a 10 port USB-C charging hub using Plugable's patented priority charging technology to efficiently charge up to ten USB-C devices using the USB-C Power Supply you already have. The left-most USB-C port has the highest priority, where a connected device will receive the maximum available power based on what it requests and the capabilities of the connected power adapter. As devices charge, they require less power and remaining power is cascaded to the device with the next highest priority, from left to right.

Compatible with USB-C Power Delivery (PD) power adapters, this hub can be used to charge both your smaller devices like phones and tablets and larger devices including laptops. Charge times will vary based on the connected power adapter and charging requirements of attached devices. Scan the QR code for more info on charging different devices.

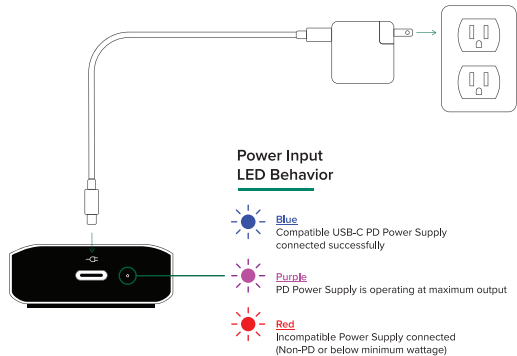

In the Box

In our effort to reduce waste, we kept it simple. The PS-10CC works with the USB-C cables and PD power supplies you already have, so we didn't include any. The only hardware you'll find in this FSC-certified, eco-friendly box is the PS-10CC you ordered. One less charger to throw in a drawer and forget about.

1. Connect USB-C Power Delivery power supply to the left side USB-C power input

Some laptops have specific charging requirements from the attached power adapter. Scan the included QR code to learn more.

2. Connect your USB-C devices to be charged in priority order from left to right

- Priority charging will charge attached devices in order from left to right
- Connect the device you'd like charged most quickly to the leftmost charging port
- Multiple devices will be charged simultaneously up to the total wattage provided by USB-C power supply
