Important Information from Doctor Butler's Hemorrhoid & Fissure Ointment

Dear Valued Customer Thank you for your recent purchase of Doctor Butler's Hemorrhoid & Fissure Ointment. Please take the time to visit my website: www.DoctorButlers.com for detailed information about my product as well as new product releases and current promotions which may be available.

The website and the information below provide great tips to help you understand your best treatment options. I recommend these tips having many years of experience as a Board Certified Proctologic Surgeon. Doctor Butler's Hemorrhoid & Fissure Ointment combine very powerful healing herbs, minerals, amino acids and a vasoconstrictor with the most potent topical anesthetic available either by prescription or over the counter.

Satisfaction Guaranteed I completely stand behind my product with a Satisfaction Guarantee or your money back. Please realize that some conditions require 1-2 weeks of treatment to receive optimal benefits.

External Hemorrhoids Sudden external swelling is typically caused by thrombosis of the external blood vessels which can feel like a localized hardened marble-like area. Long standing external hemorrhoids represent skin which has been stretched over time. It's a problem for some people since there is extra skin in the area which causes difficulty for proper hygiene. Doctor Butler's Hemorrhoid & Fissure Ointment applied internally, will shrink internal blood vessels which cause external flare ups. Using Doctor Butler's Hemorrhoid & Fissure Ointment when symptoms first occur will prevent further progression in most cases. This will help eliminate tissue from becoming swollen and stretched out long term while helping dilated blood vessels return to normal.

Optimizing Your Treatment of Hemorrhoids & Fissures Some of the theories applied in the creation of this product can be referred to as "traditional" medicine. At Doctor Butler's we sought input from "Eastern" or Chinese Medical Practitioners, to obtain even greater, more effective ingredients. By combining powerful, natural herbs with minerals, essential amino acids and traditional medicine, we are confident Doctor Butler's Hemorrhoid & Fissure Ointment is the most powerful formula available to treat symptoms of many anorectal disorders.

Application: Using the Tube and Applicator The ointment can be applied using a gloved finger or finger cot. To use the optional applicator, simply attach to the tube and squeeze until ointment starts to come out. Insert into the rectum and then squeeze the tube again. Remove the applicator and simply wipe clean with an alcohol soaked cotton ball. If the product was shipped or stored in cooler temperatures, place the tube in warm water for a few minutes prior to use to ease the flow of product coming out of the tube.

Doctor Butler's Hemorrhoid & Fissure Ointment 7 Step Plan To "Leave the Pain Behind"

1. Apply Doctor Butler's Hemorrhoid & Fissure Ointment to help soothe, protect and reduce swollen tissue and other symptoms associated with anorectal disorders. I personally recommend applying it internally (and externally as necessary) before and after bowel movements and again at bedtime.
2. Drink 6-8 glasses of water daily and follow a high fiber diet which includes whole wheat cereals, bran, fruits and vegetables. Try to avoid spicy foods, nuts, seeds, corn, popcorn, caffeine, milk and alcohol.
3. Use a "psyllium" bulking agent available at grocery stores.
4. Drink 2 Tablespoons of mineral oil daily as a lubricant (for 2 weeks only since it has been known to decrease vitamin absorption when taken long term).

5. Between applications of Doctor Butler's Hemorrhoid & Fissure Ointment, the following options should be considered for specific conditions to **"Leave the Pain Behind"**
 - A. If you have external hemorrhoids, soak cotton balls in comfortably warm witch hazel and apply for 15 minutes 3 to 4 times daily. For quick temporary relief from pain, apply a small amount of ointment containing menthol.
 - B. For external irritation use a zinc oxide ointment and oatmeal "sitz" baths.
6. If using a wet wipe, it is beneficial to apply a thin layer of Doctor Butler's Hemorrhoid & Fissure Ointment to the wipe.
7. If symptoms continue to persist mix Doctor Butler's Hemorrhoid & Fissure Ointment with an over the counter antibiotic ointment. Insert using a gloved finger.
 - A. If irritation occurs, reduce the amount of Doctor Butler's Hemorrhoid & Fissure Ointment being applied. If condition becomes worse, discontinue use.
 - B. More than 2 bowel movements a day can be a symptom of irritability which can create a high level of acidity. This can affect the ability for the body to heal itself. Avoid caffeine, milk and excessive alcohol. Using an over the counter "anti-diarrhea" medication may reduce the frequency of bowel movements on a temporary basis.

Causes of Fissures Anal tears (Fissures) are one of the most common causes of anorectal pain. Tears are often associated with trauma, e.g., passage of a hard stool, but can also occur during bouts of diarrhea, childbirth, narrowing of the anal canal or ulceration of a hemorrhoid. The most common symptom of an anal tear is pain at bowel movement, which can be quite severe and last for some time.

Tip for Healing Fissures Fissures may heal faster if Doctor Butler's Hemorrhoid & Fissure Ointment is mixed with an over the counter antibiotic ointment and is placed on a gauze pad which is then applied directly to the fissure. The gauze pad should be left in place throughout the day (and night). It can be secured in place with a small piece of tape. The rubbing action tends to help stimulate new tissue growth.

The Doctor Is In My goal is simply to help people **"Leave the Pain Behind"**. Doctor Butler's Hemorrhoid & Fissure Ointment works so well for the conditions it is intended to treat.

You should contact your physician for evaluation if symptoms do not improve within 1-2 weeks. Regardless of your progress, everyone should seek the opinion of a local physician in regards to colorectal cancer prevention. Please let me know if I can provide additional education on your condition or treatment options. I certainly wish you the best of health!
