HEAT TRANSFER PAPER **20** SHEETS

Compatible with **ALL** inkjet printers

**Works with dark color
cotton or nylon fabrics**

- ✓ T-shirts
- ✓ Tote Bags

- ✓ Tiles
- ✓ Pillow Cases

- ✓ Aprons
- ✓ Bags

BEFORE GETTING STARTED

Make sure you have all the following

- Inkjet printer
- Pigment ink
- Iron or heat press machine
- Dark color cotton or nylon fabrics(more than 60% cotton content for best results).

Create, Print, Press!

Create, Print, Press!

Create, Print, Press!

INSTRUCTIONS

01

Print the image on the front side of the heat transfer paper (the smooth and soft side is the front, and the marked side is the back). After printing, allow the paper to fully dry.

02

Carefully cut the paper into the desired shape, being careful not to leave white edges around the image.

03

Ensure that the iron's steam setting is off and that it does not have any water in it before setting the iron to either a high or cotton setting.

04

Lay the garment on a hard, heat resistant surface and iron out any wrinkles.

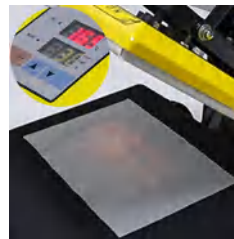

05

Peel off the back side of the paper and place the printed side face-up and flat on the garment. Cover the image with the provided separator paper.

06

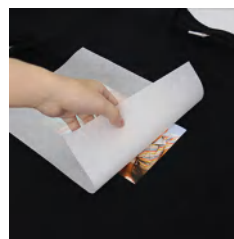

Once the iron has been heated to a high temperature, use the iron to apply firm pressure evenly across the entire image for about 2-3 minutes.

If using a heat press, close the heat press and adjust the pressure to a suitable state.

Recommendation:

25-30 seconds at 329°F ~ 365°F (165°C ~ 185°C).

07

After the ironing is complete, remove the separator immediately to reveal the completed transfer.

TIPS

1. Do NOT use sublimation ink with laser printers
2. Set paper size to 8.3 x 11.7 inch, before printing image to transfer paper
3. Check your printer or ink if the image printed on the paper has obvious streaks or indentations
4. If using an iron, lay the garment on a hard, heat resistant

surface i.e. wooden table

5. Avoid pulling fabric forcibly after transfer, smudging the image with your hands, or washing within 24 hours
6. Avoid washing with bleach or alkaline detergent
7. Do not tumble dry; colors bleed at high temperatures

We value our customers' opinions, so please don't hesitate to reach out if you have any questions or concerns regarding our products.
