

Product Size Guide

Buying the right size swim vest is critical too small and the product will be uncomfortable, restrictive or even possibly unsafe; too large and the product will likely slip off and offer none of the benefits for which it was intended.

To help you with the right decision, we have put together a size guide. This takes into account weight, chest size and age.

Most of our size guides are named according to age groups (for example, "1 to 2 years" or sizes S, M, L. However, **it is important to remember that all children grow at different rates, so these age groups are best practice guidelines.** The most important thing is to focus on the individual measurements listed in tandem with the age groups, such as chest size and weight. This will give you a much better idea as to what size to purchase.

Please note: **All measurements are approximate and will depend on the size and water confidence of your individual child.**

Size	Age	Chest Size
S	1-2 years	Up to 49 cm
M	2-5 years	Up to 58 cm
L	5-9 years	Up to 63 cm

To help you choose the correct size, please read the above chart carefully.

If your child's chest size is on the border of 2 different sizes, then we highly recommend choosing the larger size.

The more comfortable fit for the wearer the more effective the buoyancy aid will be. Please reach out to us prior to purchase if you are still unsure.
