FAQs

4 What is the best decibel setting for my infant/child?

For all users, we recommend placing our sound machines at least three feet (3') away from the sleeper's head. At a distance of 6.5 ft, we measure the dB level of the Dohm's loudest setting at 52.5 dB and of our lowest setting at 41.5 dBA

5 What is "Pink Noise"?

While we call it "white noise" because that's the term used by most of our customers, our Dohm products are actually creating "pink noise." If you sample various "colors" of sounds, you will quickly hear that actual "white noise" is highly annoying and not conducive to sleep. Our Yogasleep Signature Sound contains less high frequency content than "true" ("scientifically defined") white noise, and also less than most competing sound machine models on the market. The ear is more sensitive to high frequency sounds, so it perceives our sound as more soothing.

2 Can I clean my sound machine?

Sure. Here's what we recommend: simply wipe the exterior with a damp cloth. You can use a Q-tip and rubbing alcohol to clean the vent openings. In order to clean the inside of the unit, use a vacuum hose and proceed to each opening suctioning out any dust inside the unit.

3 Can the Dohm Classic be used internationally?

The Dohm is only safe for use within the USA and Canada with a 120-volt plug and should only be used in a 120-volt polarized outlet. We do sell travel sound machines for international use.
