

Site Unreachable troubleshooting steps:

1. Plug the NAS to a router which surely has access to internet; ensure the NAS and the computer in the same network segment.
2. Please install a client like **putty**. Fill the NAS IP address in Host Name, 22 as the Port, and click “Open”.

3. Login as “root”, input the password as **Admin123**, and hit Enter.

4. And then input **/etc/tos/scripts/wget_from_online**, and hit Enter.
5. After that, click the IP address in TNAS PC and click Login, the site should be reachable.
