

Troubleshooting Steps

Success of application depends on the following factors:

- Correct heat setting for ironing (according to the care label of garment used on).
- No steam on the iron as that can affect the adhesive.
- Laundering of the garment (wash cycle).
- Turn garment inside out or with curtains and drapes, lay flat, underside up.
- Iron garment or fabric to crease in hem at required length. (suitable heat for fabric)
- Cut web to required length and place between two sides of fabric to be bonded. Do not allow tape to protrude or have direct contact with the iron.
- Set iron to a hot temperature and use a low steam setting. Synthetics need special care, do not allow to dry out.
- Press iron slowly and firmly over hem for approx. 20 seconds. Allow to cool for 5 minutes

To Alter Hem

- Follow step 5 and peel apart while hot. Some adhesive will remain.

Care Instructions

- Always test on a hidden area first. Korbond Hemming Web is washable and dry cleanable.
