Feeding Guidelines

The recommended feeding amounts indicated are based upon the average nutritional needs of an adult dog with normal activity (using a standard 8 oz/250 ml measuring cup, which contains approximately 96 g of Purina ONE). Factors, such as a dog's metabolism, breed size, activity level, age and whether the dog is spayed or neutered, will affect the amount of Purina ONE needed to maintain an ideal body condition. The pet experts at Purina have provided the feeding amounts indicated as a starting point. If you find that your dog is losing weight or becomes

overweight when fed these amounts, please adjust accordingly. To help your dog maintain an ideal body condition, monitor your dog's weight on a regular basis, making sure that his ribs are easily felt and the waist is visible when viewed from above. Maintaining an ideal body condition can impact your dog's lifelong health.

PUPPY FEEDING INSTRUCTIONS

Start puppies on moistened Purina ONE as early as they will nibble at solid foods, generally 3–4 weeks of age. Feed pups (to six months of age) all of the moistened or dry Purina ONE they will consume at intervals throughout the day. If water is added, use no more than one part warm (not hot) liquid to four parts Purina ONE, changing frequently to ensure freshness. If fed dry, this formula may be kept before pups at all times.

WHEN FEEDING FOR REPRODUCTION

Purina ONE provides the extra nutrition needed by reproducing females in stages of gestation and lactation. Food consumption may vary during gestation, so feed the amount needed to maintain the pregnant female's good body condition. Food intake may double or even quadruple during lactation.

MAKING THE SWITCH TO PURINA ONE

Although you'll be anxious to see the difference Purina ONE can make in your dog, please allow 7–10 days to ease the transition from his current food. Each day, simply feed a little less of the previous food and a little more Purina ONE until you're feeding Purina ONE exclusively. This gradual transition will help avoid dietary upsets.

NO SUPPLEMENTS NECESSARY

Purina ONE provides 100% complete and balanced nutrition. There is no need to add vitamins, minerals or other supplements, unless specifically directed by a veterinarian.

FRESH WATER, PROPER DIET & VETERINARY CARE

Be sure to provide fresh water in a clean container for your dog daily. Proper diet, exercise and veterinary care are the best ways to keep your dog healthy. If your dog hasn't had a check-up in the past year, please make an appointment today.

* 1/2 cup (48g) for each 10 lbx. (4.5kg) of body weight over 100 lbs. (45 kg)

HOW TO SWITCH YOUR DOG'S FOOD

It's always best to transition your pet's diet slowly to avoid potential stomach upset and allow your pet's digestive system to adjust to any new ingredients.

DAYS 1-2

Introduce Purina ONE to your pet in small amounts, still feeding primarily the old food.

DAYS 3-4

Feed a little bit more Purina ONE to your pet each day.

DAYS 5-7

Gradually increase the amount of Purina ONE food and decrease your pet's former food until you are feeding Purina ONE exclusively.

DAYS 7-10

By now you should be feeding your pet exclusively Purina ONE.

WHERE CAN I GET ADVICE FROM OTHER DOG OWNERS?

Visit our community tab to see the diverse topics discussed by our community of pet lovers.

IS IT SAFE TO SWITCH MY DOG'S FOOD?

Yes, unless your veterinarian recommends otherwise. Be sure to transition your pet's diet slowly to avoid potential stomach upset and allow your pet's digestive system to adjust to any new ingredients.
