

Instruction manual in English for a 25 L mop bucket with integrated side-press wringer.

Important Safety Information

- Place the bucket on a flat, stable surface that can support its full weight (up to approximately 25 kg when filled).
- **Do not** stand, sit, or place heavy objects on the bucket or wringer.
- Keep out of reach of children and pets.
- Do not overfill — leave space to avoid spills when inserting the mop.
- Release the wringer handle slowly after use to prevent injury from spring tension.
- Use only water and approved floor cleaning solutions .

How to Use — Step by Step

1. **Prepare the bucket** Place the bucket on a flat surface. Using the built-in measurement scale inside the bucket, add clean water and the correct amount of floor cleaning solution (follow the cleaning product's instructions for dilution ratio). Fill to no more than 2/3 full to prevent overflow when dipping the mop.
2. **Soak the mop** Dip the mop head fully into the cleaning solution. Let it soak for a few moments so the mop absorbs plenty of liquid.
3. **Wring out the mop** Lift the mop out and let excess liquid drip back into the bucket for a second. Place the mop head fully into the wringer basket/area (on the side of the bucket). Push/press the wringer handle (lever) down firmly and steadily toward the bucket until most of the excess water is squeezed out. Continue pressing until the mop reaches your desired dampness level (drier for faster-drying floors, slightly wetter for heavier soiling). Slowly release the handle back to its upright/resting position — do **not** let it snap back suddenly.
4. **Clean the floor** Use the damp mop to clean the floor in manageable sections . Move in overlapping “S” or figure-eight patterns for even coverage. Repeat as needed: re-dip the mop in the solution (step 2), then wring it out (step 3) before continuing.
5. **Empty and clean after use** Carefully carry or pour out the dirty water (use the bucket's shape/spout if present for easier pouring). Rinse the inside of the bucket and the wringer thoroughly with clean water. Wipe down all surfaces if necessary. Allow the bucket and wringer to air dry completely (upright or inverted) to prevent mold, odors, or bacterial growth. Store in a dry place — the square shape makes it easy to stack or fit into cleaning carts/storage areas.
