

Charging the AA/AAA batteries

This charger is intended for use with rechargeable Ni-MH batteries only.

Batteries must be charged in pairs(2 or 4 pieces) in the charger. For charging only 2 cells, insert the batteries to the left or right side of the charging terminal. Please refer to the (Figure 1) and (Figure 2) in the user manual.

Using the USB output function

The USB charge port takes priority over charging the AA/AAA batteries. If you have batteries installed for charging and a device is plugged into the USB port, the charging of AA/AAA batteries will be halted until the USB port is no longer used.

Once the USB device is fully charged and stop using power or it is unplugged from the USB port, the AA/AAA batteries will resume charging. The 'green' LED indicates when the USB port is in use or available for use.
