Press and Activate

1. Activate your Smart Tag by pressing the button on it. It is ready to be connected to your phone when you hear a melody with rising tone. If no action is taken within 1 minute, you will hear a melody with falling tone and the smart tag will go back to sleep mode. Press again to get it ready.
2. Open the SwiftFinder APP on your phone to link the device (see details on next section). Once completed, your Smart Tag is ready to use.
3. Test the connectivity by pressing the button on the Smart Tag. It beeps once if the tag is connected to the phone and twice if not.

Features

Find your stuff

Can't find what you're looking for? Ring the smart tag!

Find your phone

Ring your phone from the tag, even when the phone is in silent mode!

Share your device

Share the device with friend and family. They can help to find your stuff when your phone is not around!

FAQ

- How can I link my Smart Tag to a different account?
You need to unlink it from previous account first. Simply login to the last account in the SwiftFinder app, delete the Smart Tag object.
- Why can't my Smart Tag be found in the APP?
It's likely your smart tag is in sleep mode. Press and hold the button to activate it first.
- Should I keep the SwiftFinder APP running all the time?
You can choose to only run the app when you are trying to find the tag. However, there are many advanced features, like separation alert, keeping last seen location, requires the app running all the time. The APP has been optimized for running at background without draining battery. For more info, please refer to our Facebook page.

- Why does my Smart Tag sometimes beep randomly?

If you have separation alert set up, the Tag will beep when losing Bluetooth connection to the phone due to various reasons. You can turn on the silent mode feature to avoid false alert in indoor environment. Please refer to our Facebook page for more detail.
