

CETAPHIL

What is Cetaphil?

Cetaphil is a line of skincare products specifically designed and clinically proven to help people take care of their sensitive skin. Cetaphil believes your skin health is what leads to beautiful, glowing skin, and so we develop all of our products with your skin's health first and foremost in mind.

What Makes Cetaphil Different?

The Cetaphil team is dedicated to skin health, not superficial fixes. Our work is based in science and research, and to make sure that our products truly take care of your skin, we work closely with dermatologists to develop our cleansers, moisturizers, baby products and sun care solutions. Cetaphil products are suited to even the most sensitive skin, which is why dermatologists have recommended us and trusted us for over 70 years.

Who can use Cetaphil?

Cetaphil products are designed to be gentle and effective on even the most sensitive skin. This means that whether you have generally normal skin, or have a skin condition such as acne or eczema, Cetaphil respects your skin and can provide the cleansing, moisturizing and protection against dryness that your skin needs.

We have a wide range of items available, including products made specifically for babies' skin and hair, as well as skin care items designed with dermatologists to help take care of redness, oily skin and dryness-prone skin.

Why are Cetaphil products suited to sensitive skin?

Across its different products, Cetaphil uses formulas that reinforce the skin's natural protective barrier. We also design our products to have a pH level that respects the skin's acid-alkaline balance. We make sure to only use high quality ingredients, and in addition, many of our formulations are fragrance-free and hypoallergenic, making Cetaphil ideal for daily use even on sensitive skin.

Are there Cetaphil products that are paraben-free?

How are the alcohols contained in Cetaphil products different from those found in other products that tend to irritate the skin?

Alcohols can be skin irritants, but only the “drying” alcohols (the most common ones are ethyl alcohol and isopropyl or rubbing alcohol). Cetaphil products contain none of these irritating or drying alcohols. The alcohols in Cetaphil are much larger molecules than the typical “drying”

alcohols. Thus, the ingredients we use, such as cetyl alcohol and stearyl alcohol, tend to trap water and are *moisturizing* – not drying. These ingredients are part of the reason why Cetaphil is such a gentle cleanser.

Are your products gluten-free?

Ingredients in our Cetaphil products are not recognized gluten sources; however, Galderma does not test for trace amounts of gluten that may be present in the ingredients or as a result of the manufacturing process. Additionally, ingredient suppliers may change. If you are a celiac disease patient, you may want to consult your healthcare provider before using Cetaphil.

Does Cetaphil test on animals?

No, Cetaphil does not test any of its products on animals.
