Part 1- Something about Installation

1. Something before Installation

(1)Attention!!

- a. Please use a pin to reset first
- b. Please prepare a Class 10 microSD card (NOT INCLUDED) with a capacity of 32GB and format it before first use. If you use more than 32 GB SD card, please format it to FAT32 format on computer and format it again on dash cam before use.

(2)How to format the SD card on computer?

There are two ways to format the sd card on computer.

Option 1:

Please connect this cam with the computer via USB cable.

Option 2:

A.Take out of the SD card from this cam and insert this SD card into a card reader.

B. Insert the card reader with the SD card to computer.

C. Enter into “computer” and click the right mount button once and then click “Format”

D. Please click “FAT32” to finish the format.

(3) How to format the SD card on dash cam?

A. Long press "Orange" Button to turn on this cam.

B. Press "menu" button twice (between up button and down button) to enter into the menu mode.

C. Find "Format" and press orange button to confirm "format" to format the SD card.

Dash Camera C420 User Guide

- SELF DEVELOPMENT & BRAND NEW DESIGN - C420 continues the lightweight, mini design of the previous version; it can be perfectly hidden behind the rear mirror. The appearance, texture and the upgrade of the button make the product feel more comfortable; the operation is still simple and friendly to new users.
- 1080P FULL HD & SUPER NIGHT VISION - 1080P Full HD recording and advanced sensor ensure full high-definition recording during the day and night. Equipped with a wide-angle camera of 170°, it captures every detail on the way.
- 24/7 REASSURING ALL-WEATHER MONITORING - The car recorder includes Motion Detection and Parking Monitoring. It automatically starts recording when it detects a collision or shakes, providing you with security every moment.
- LOOP RECORDING & G-SENSOR - When these two functions are turned on, the dashcam overwrites the oldest videos to ensure continuous recording; when a shock or collision is detected, the camera will lock the current video and prevent it from being overwritten.
- EASY TO SET UP & USE - The dash cam only takes 2 mins from unboxing to installation. It automatically starts recording when the engine is turned on. Simple buttons and diversified features satisfy your daily driving requirements.

② Press  and select "on" to turn on this feature.

③ Press  button to date/time.

④ Press  /  button to select the number time.

⑤ Press  to the previous recording mode.

Part3 - Warm Tips

- (1) Please prepare a **max 32 GB Class 10 or above Micro SD card**. Remember to format SD card on the camera before the first using. This dash camera support 64-128 GB SD card. But please remember to format it to FAT32 Format on computer and then format it in the dash cam.
- (2) The screen will be black after 1 min but the camera is still recording. Red light flashing means the camera is recording. If you want the screen always on, please enter into menu to turn off the **"screensaver"**.
- (3) To prevent the SD card from being full and avoid this camera easily showing "please format the SD card", please set cyclic record to 3 min(loop recording) and set G-sensor to "low". This cam comes with loop recording. **Loop recording can overwrite the unlocked files when the SD card is full. The locked files created by g-sensor can be saved and will not be covered.** This SD card will still be full when turn on loop recording with gravity sensor and parking guard.
- (4) The parking guard is mainly used in parking. Please turn off the parking guard when driving. (Reason: If you use this dash camera with parking guard when driving, it will make this SD card easily have more locked files created by g-sensor.) Because the dash cam battery is the **built-in battery with small power capacity**, which makes the cam record about 15 minutes. Large battery will cause the security affairs like battery explosion. All the dash cameras will do the same. If you would like to get a long time monitoring, we suggest you to buy a APEMAN **CH50 hardware kit** for power supply
- (5) This cam has the **starlight sensor**. It will adjust the light automatically based on environment. If you do not like this feature or think the night vision does not fit your requirement, we will send a firmware to you to improve this brightness.
- (6) If you think the sound of powering-on or off is so noise, we will send a **f¹irmware** to you to turn off it.

Any advice would be appreciated!
