

OP/TECH USA®

Utility Strap™ - Sling Instructions

- Features OP/TECH USA's exclusive Uni-Loop connector, compatible with several neck straps, wrist straps and harnesses
- Camera or binoculars glide freely up and down
- Fully adjustable
- Second connector for Pro Battery Grips

Attach the male Uni-Loop connector to the right side of your equipment as shown (most cameras will only use this single connector). Next attach the Uni-Loop connector to the corresponding quick disconnect on the sling. The second Uni-Loop connector is only used on cameras with a second connection area located on the right side or on Pro Battery Grips.

Place the strap pad over the left shoulder. The triglide on the back adjusts the sling to the right length. The second triglides can be positioned to act as a stop to prevent your camera from sliding too far back on the sling.
