The stove becomes hot when in use, do not touch them to avoid injuries from burn hazard
Please use in a place where air circulates
Please use windshield in a windy environment

Product Details:

Model: BRS-3000T
UnFolded Size: 85mm x 68.5mm
Folded Size: 37mm x 52mm
Materials: Titanium & Aluminum
Weight: only 26g
Max. Load: 1000g
Power: 2700W
Fuel: Butane/Propane
Gas consumption: 140g/h

Operating Instructions:

- Please check the sealing ring connection between the stove and the fuel canister in good condition, and verify the gas adjustment valve is closed.
- Screw the stove to the fuel canister clockwise. Be sure to tighten fully to prevent gas leaks.
- Unfold the extension arms outward to expand the cooking surface to maximum size.
- Turn on the gas adjustment valve counterclockwise to release some gas and ignite. Use the gas adjustment handle to increase (counterclockwise) or decrease (clockwise) to the desired settings (Normal flame color is blue.)
- Close the gas adjustment valve clockwise until gas off and cools down the stove. Remove the fuel canister when the stove is fully cooled down, then store it.

Important notice

If the altitude or pressure of the fuel tank is high, light a small fire first. Place the pot, then fully light up.
