

How to update pre-installed apps

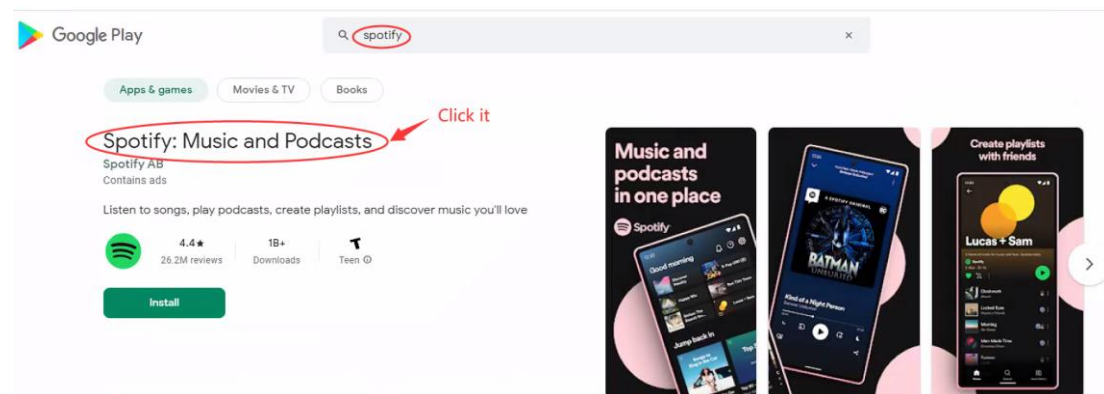

Although the G1 player turns off side-loading of apps, all pre-installed apps are included in the device's whitelist, so you can still install the latest APK file to update them. Please follow the steps below:

STEP 1: Download the app's APK file

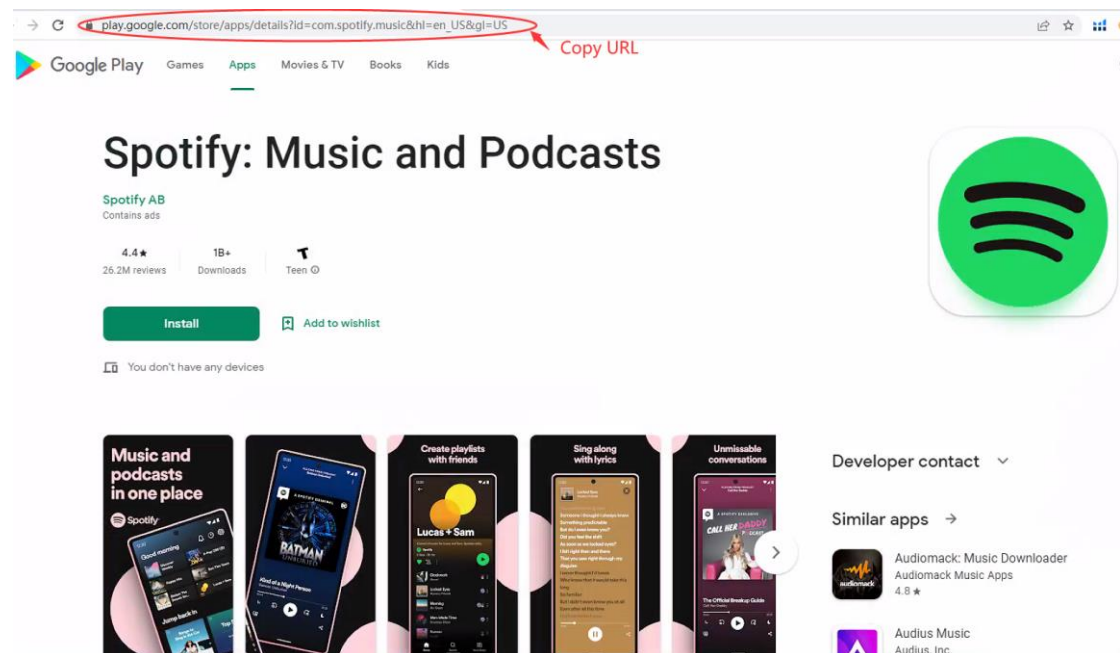

There are 2 ways for you to easily get the APK file:

Method 1: Pickup APK file from Google play store using the download tool (take Spotify as an example):

1) Visit the Google play store - <https://play.google.com/store/apps> on your computer, search for the keyword "Spotify", and click the Spotify title in the search results.

2. Copy the URL in the address bar in the jump page.

3. Visit APK-Downloader - <https://apk.support/apk-downloader>, and paste the Google Play URL copied above into the box and click "Analyze" button.

APK Downloader

Paste Analyze

Config Your Device ID

Country: Default Android: Default Device: Default DPI: xxhdpi (480) Language: Default

Download the Android app to your desktop and device directly from Google Play.

How to Install an APK on Android

1. Make sure that third-party apps are allowed on your device: Go to **Menu>Settings>Security>** and check **"Unknown Sources."**
2. Tap the **APK file**. Allow the app any required permissions it asks for. Then, at the bottom of the installer window, click **INSTALL**.
3. You'll see a confirmation that the app is installed. Now you'll see the app available in your list of installed apps.

4. APK-Downloader will automatically generate the APK download link, click it to download APK file.

**Here you can view the version name, version code, update time, etc. of the application corresponding to the APK file.*

APK Details

```
{
  "PackageName": "com.spotify.music",
  "VersionName": "8.7.42.943",
  "VersionCode": "88349129",
  "UploadDate": "Jun 19, 2022",
  "Creator": "Spotify AB",
  "Device": "Default",
  "Android OS": "Android 10"
}
```

Tips: APK-downloader has Chrome extensions available to help you extract APK files more conveniently.

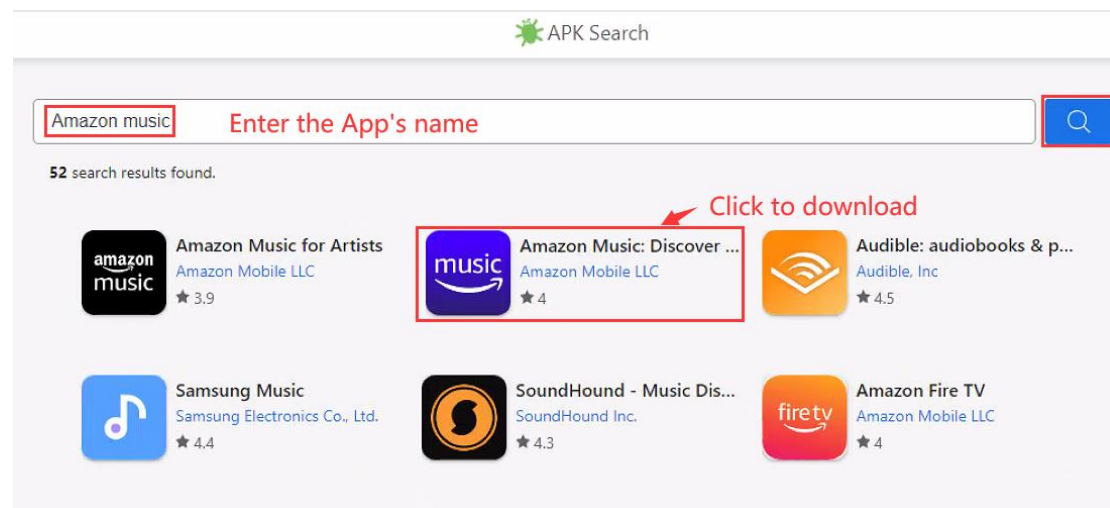

Other similar download tools are:

1. <https://apkcombo.com/apk-downloader/> (with Chrome extension available)
2. <https://apps.evozi.com/apk-downloader/>

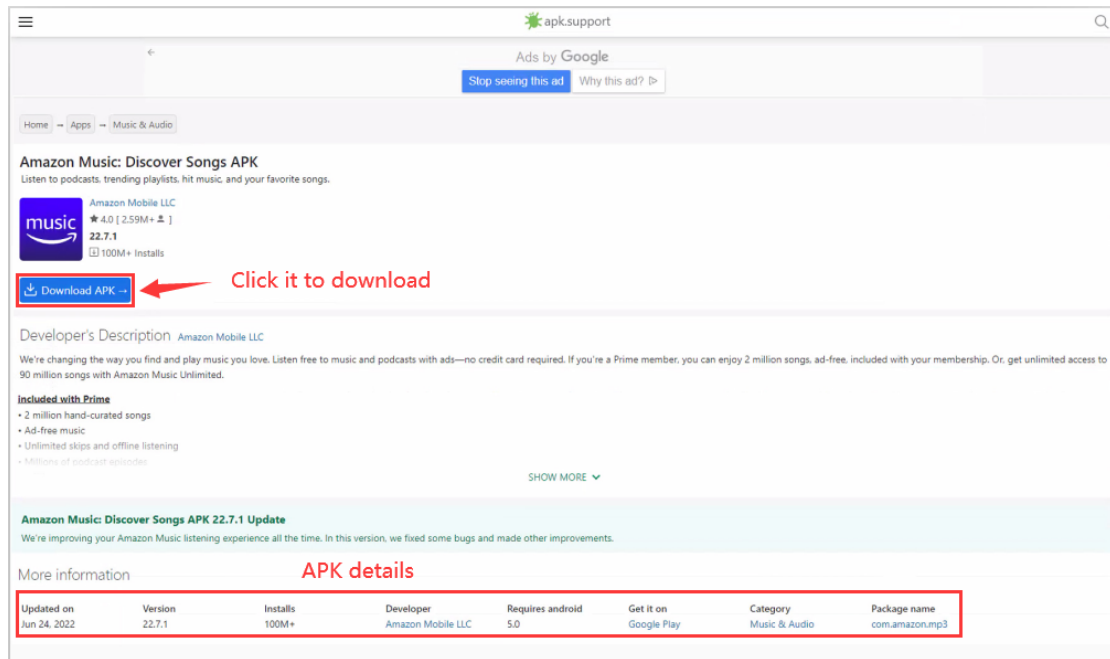

Method 2: Download an APK from a third-party APK provider website (take Amazon Music as an example)

1. Visit the website of the third-party APK provider - <https://apk.support/> , and enter the application name "Amazon music" in the search box, click the search button, and then click the target application in the search result list, as shown below :

2. Click the button [Download APK →](#) in the jump page to get the APK file.

**Here you can view the version name, version code, update time, developer, etc. of the application corresponding to the APK file.*

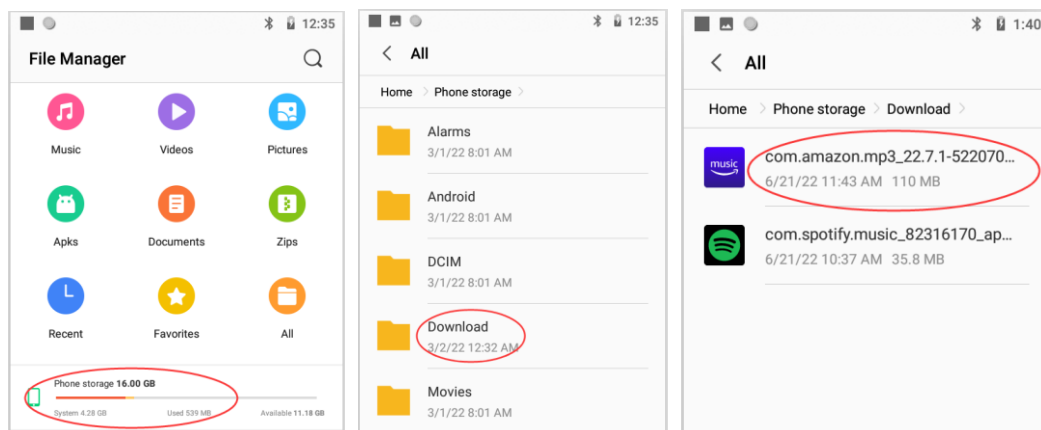

Other similar third-party APK providers are:

1. <https://www.apkmirror.com/>
2. <https://apkpure.com/>
3. <https://apkcombo.com/>

STEP 2: install APK files to update apps

1. Save the APK file downloaded by the above method to G1 player, and then find it in "File Manager" of G1 player.

2. Click the APK file and follow the prompts to complete the installation and update
